ACCORD ELECTRICAL Solar Care Plan

Protect your investment from only \$195 per year

Come and join the ever-growing number of satisfied Accord Electrical and Solar customers. Here at Accord, we're ready to assess your current system and provide a proactive plan to get the most out of your investment.

Accord Electrical and Solar have been operating on the Sunshine Coast for 30 years. We should also point out that we only service the Sunshine coast. We believe that to provide the highest level of reliable support, you need to be faithful to the area in which you operate.

We understand that a solar installation is not just an investment in the planet, but also your family's future. Like any investment, solar systems need regular maintenance and checks to ensure their longevity, and that's something we've never overlooked here at Accord. That's why we invite you to join the Accord Solar Care Plan. We can give you the peace of mind that your system is performing to its full potential so you can keep getting the most out of the sun.

"Did you know that systems not regularly cleaned and maintained can lose up to 25% in performance?"

Why is it important and recommended by Accord Electrical to have this care plan?

Prevention is Cheaper Than a Cure

On top of cleanliness, there are numerous other issues that may crop up over a system's lifetime that often go unnoticed. Unfortunately, it is often the case that owners never check their panels until something goes wrong, and even those who do check may not be able to pick up on issues affecting performance.

For example, a panel may develop cracks as a result of hail or other falling objects, or parts of the racking may have come loose.

We at Accord Electrical recommend that panels be cleaned and inspected at a minimum once every year. Cleaning at regular intervals prevents build-up of residue and always keeps your panels operating optimally.

Regular checks can also identify problems and stop them from developing into something worse, and it often takes an experienced professional to notice these warning signs.

Having a trained professional perform your maintenance checks will ensure all aspects affecting the health and performance of your system are thoroughly inspected. These include potential fire safety issues, cracks, hot spots and nests from uninvited guests like birds, rats and possums.

Taking early action on issues affecting your solar installation is much cheaper than potentially costly repairs or replacements down the track.

A Safety-First Approach

Another reason to go professional is safety: Getting on your roof can be a dangerous business, especially without good safety gear. Without the right gear and experience, you could put yourself at risk of serious injury.

At Accord Electrical, we firmly believe in taking care of the after-sale needs of all our residential and business solar customers.

The Accord Care Plan makes it easy for you to give your panels a regular once-over to keep things working at their peak for many years to come. Looking after your solar investment is the best way to squeeze more juice out of your PV panels, helping to maximise the value that your solar panels deliver.

Keeping Your Energy Clean

Solar panels produce more energy when they're clean. The dirtier the panel, the more significant the energy loss, which costs you money.

There are many external factors that can lead to dirty, inefficient solar panels, including dust and road grime, salt spray and bird or bat droppings to name a few.

A photovoltaic (PV) system performs best with completely unobstructed access to the sun's rays for most or all of the day. Even something as seemingly inconsequential as a residue layer can affect the performance of your panels, while bigger spots & obstructions can have a much greater impact than their size would suggest.

What is included?

- + A fully qualified Accord electrician will perform a complete clean and safety check of your PV system, scheduled on an annual basis.
- + All panels, isolators, cabling, connection points and conduits will be inspected and expertly checked.
- + All panels will be professionally washed and cleaned top to bottom, allowing ultimate efficiency and power output.
- + The inverter will be inspected and carefully checked, ensuring all electrical cables, connections, isolators, wall mounts are safe. Readings will be taken and a design summary of performance is included to provide you with an accurate account of how well your PV system is performing year in year out, giving you complete piece of mind.
- + A detailed report showing all readings and findings.
- + 15% discount on all parts, materials and labour should any repairs be required.
- + A reminder phone-call a week before the scheduled service to keep you informed.

Date of first clean & check: _____
Next scheduled Clean & Check: _____

Terms & Conditions:

- Array electrical connections will be visually inspected.
- Array readings will be taken at the isolator. Individual panels will not be unplugged or disturbed unless a problem is found on the array. This would constitute additional work should further investigation be required at the individual panel level.
- Prior to accessing roof, we will undertake a condition assessment and notify the customer of any potential issues. If a roof has old and fragile tiles, we will advise the customer that we cannot guarantee against breakage and this will need to be accepted or acknowledged prior to work being undertaken.
- The inspection is a broad overview of the solar system. If faults or repairs are identified, these will be priced separately and are not included in the base inspection.
- If available, the original installation documents should be provided prior to the inspection.
- The customer is required to provide access to a water supply to carry out the cleaning of panels.
- Special access equipment is not allowed for. If this is required, the price for Care Plans will vary accordingly and be quoted on a case by case basis.
